

# Crating Service

ecube.aero

# Experts in the field

Our expert, in-house crating team ensures your assets are safe and secure, whether they're in storage or being shipped round the world.

The crating team is central to every ecube disassembly project. We can disassemble and crate everything from wing flaps and landing gear down to the smallest parts. Our crates can hold a tonne of aircraft components.

So, your assets can be stored and ready to ship whenever you need them.

In 2024 ecube assembled nearly **4,000** bespoke crates.

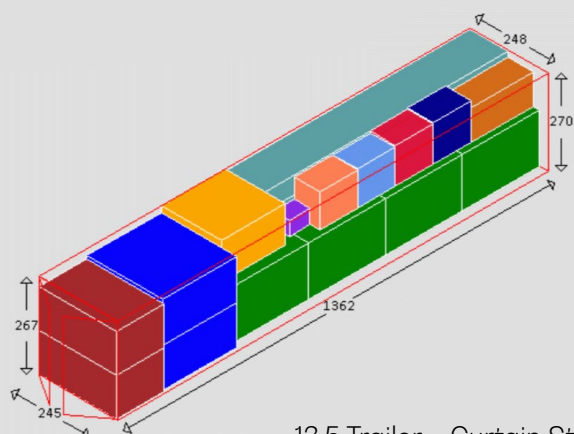

# Exceptional design

Inside the crate, we design structures to ensure the part is securely held, with no chance of movement or damage. Our in-house team quality check items like this before they leave.

All our crates show a description, commodity code and value, along with the right approvals for the region.

So if it's APU's, Thrust Reversers, Ram Air Turbines or even Dangerous Goods, we've got you covered.

13,5 Trailer – Curtain Standard

Crating also dovetails with the ecube Logistics team. Our crates are specifically designed to meet shipping container requirements and maximise the footprint.

"Our Castellón team took a whole lorry-load off the initial plan. They did this with expert crating and judicious use of space-optimising software."

# Optimise space

ecube's exceptional crating offers you a storage solution too.

We make parts stackable and space-saving, whether they're being shipped, or stored.

Rather than leave your aircraft sitting in the desert being picked at over time, we offer secure long-term crated storage for your aircraft's components. So they're always ready for shipping or sale.

Our customers love our crates so much that they even ask to reuse them.

We don't just supply aviation, we offer our bespoke crates to other industries too.

“

Our crates are built to last. So our customers often keep them for storage at their locations and onward shipping. They're designed to be reused and stackable, to save space onboard and at their destinations.

We've developed an internal system we refer to in-house as the 'toast rack'. It means items can be arranged horizontally, which makes them easy to access and keep secure until you need them.

OWEN WILLIAMS,  
HEAD OF CARPENTRY AT ECUBE

# Our team

The ecube crating team are experts.

We have a dedicated carpentry team who work with sustainably sourced redwood from Scandinavia.

All our crates meet international standards for phytosanitary measures (ISPM 15), which ensures the wood is disease-free.

# How do you ship something large and valuable?

With ecube's expert care and excellent crating!

ecube crating is an integral part of all our disassembly and storage work:

- Built to last
- Saves space by being stackable
- Carries a tonne of parts
- Meets international standards (ISO Containers)
- Keeps your valuable assets safe and secure
